## Billing rules

### Technical conditions

The introduction of the cable to the premises of the Atman Data Center should take place in accordance with the technical conditions issued by Atman, in accordance with the rules of access, staying and performing work in the Atman Data Center.

### Cable charges

The monthly fee covers the provision and maintenance of the teletechnical ducting system within the Atman Data Center in relation to the connection chamber to the indicated MMR . As part of the provision, the Service Recipient has the option of introducing a single fiber optic cable (cable) with a diameter of not more than 9.5 mm and the number of fibers not more than 72J. Inserting another cable into the same MMR results in charging another fee for providing and maintaining the teletechnical ducting, inserting another cable into another MRR results in charging another fee for providing and maintaining the teletechnical duct and a fee for another 3U. Atman allows the fiber optic cable to be routed directly to the Atman cabinet located outside MMR . In this case, an additional monthly fee will apply: fiber-connect charged for each single fiber connecting the introduced fiber optic cable of the Service Recipient with the internal correspondence (of the same Service Recipient) in the Data Center reaching the Atman cabinet.

The installation fee for the cable will be determined by Atman after the detailed design is prepared. Atman does not allow the possibility of running the cable bypassing it MMR .

### Fees for 3U

Each 3U space is equipped in accordance with the product's technical specification. Settlement of the cost of electricity in the case of infrastructure launched under MMR is based on a flat-rate fee model based on nominal power (in accordance with the rules described in the contract for collocation services).

### Contract duration

The agreement is concluded for a period not shorter than 24 months.

### VAT

All prices are in net values. The prices quoted do not include applicable VAT.
